Summary

I'm a front-end web developer and UX/UI designer focused on building interfaces that look beautiful, feel effortless, behave predictably, and scale cleanly over time. I care about accessibility and neuro-inclusive design as a baseline for good design. When something works well for people with different needs, it tends to work better for everyone.

Work Experience

Front-End Web Developer & UX Engineer July 2025 — Present
Students' Union Management System (SUMS) Lincoln, UK

- Re-architected the information architecture for a large-scale SU website (20k+ users), consolidating 60+ navigation items into 6 task-oriented sections. Independently led the restructuring, defining navigation patterns and validating changes through stakeholder, staff, and user feedback.
- Led front-end development for the [Engine Shed](#), delivering a full rebuild for a commercial platform with 30k monthly users and reducing clicks-to-purchase from 8-11 to 3-5 across mapped user journeys.
- Designed UX and UI for an SU app integration with a national membership organisation (7m+ members), defining cross-system user flows and interface patterns and iterating based on stakeholder feedback.
- Conducted full-site UX and accessibility audits, resolving WCAG 2.1 compliance issues and improving semantic structure through screen reader and keyboard navigation testing.
- Rebuilt [Northampton Students' Union's](#) website from a legacy ExpressionEngine front-end to a component-based system powered by Pluto API, delivering 8+ core pages and 12+ reusable components for 12k+ students.
- Designed a multi-level email analytics dashboard (campaign, email, and link-level) in Figma, surfacing engagement trends, device breakdowns, and funnel drop-offs to support data-driven campaign optimisation.
- Delivered the [Swan Guesthouse's](#) microsite within 2 days under a strict commercial deadline, ensuring accurate content launch for peak booking season and protecting revenue
- Engineered 4 Laravel API endpoints to replace legacy ExpressionEngine functionality for the 'SUGgestions' module migration, enabling efficient pagination to cut load times by 80% and delivering richer detail to improve UX.

Software Engineer (Internship) Feb 2025 — Jun 2025
Synx Games Lincoln, UK

- Co-led development of a multiplayer web-based game prototype, building UI and core gameplay systems using TypeScript and React within an 8-week delivery window.
- Collaborated on product planning and pitching, contributing to a £500k Roblox Creator Fund application with retention and monetisation strategy.

Software & Data Technician (Internship) May 2024 — Sept 2024
B-Hive Innovations Lincoln, UK

- Improved reliability and data quality in Python-based applications by diagnosing and resolving critical pipeline issues, supporting accurate downstream analytics and model training.

Education

University of Lincoln Lincoln, UK
Master of Science in Computer Science: Distinction-level average (86%) Sept 2024 — Sept 2025

- Dissertation postponed for medical reasons

University of Lincoln Lincoln, UK
Bachelor of Science in Computer Science: First Class with Honours Sept 2021 — May 2024
